

Our Environmental Policy

www.durr-group.com

DÜRR GROUP.

Our Environmental Policy

Sustainability is a central motive for action at all levels of the Dürr Group. In terms of **ecology**, our primary objective is to reduce the impact of our business activities on the environment. We are focusing on our products and services as well as on our production and value chain.

Products & Services

With our **resource-saving, energy-efficient** and **emission-reducing innovations**, we help our customers to achieve greater sustainability. Our machines and plants reduce the ecological footprint of production processes, thus enabling our customers to produce in an environmentally friendly manner.

Production & Supply Chain

In our own processes and in the production set-up, we pay attention to the **careful use of resources** and are committed to an **ecologically sustainable supply chain**.

Our approaches

Further development of our products

- Promotion and use of technological innovations
- Increase of energy efficiency
- Reduction of emissions
- Reduction of resource consumption

Reduction of our ecological footprint

- Environmental management certification of production and assembly sites and sites with technology centers
- Reduction of energy consumption and CO₂ emissions through the use of state-of-the-art technologies
- Increase in the share of renewable energies
- LEAN management for the improvement of internal processes
- Intensification of digital work processes in order to reduce business travel, especially flights
- Incentives to promote low-emission service and fleet vehicles

Sustainable supply chain

- Localization of supply chains worldwide (proximity to project and customer)
- Minimum ecological requirements with exclusion criteria for suppliers
- Specification of a binding code of conduct including ecological criteria for suppliers

Our practical implementation

Based on the above-mentioned approaches, the Management Board, in coordination with the Corporate Environmental Committee, determines potential actions and concrete goals. The resulting improvement activities are followed up regularly and the target achievement status is reviewed annually.

Country-specific conditions require different approaches for individual potential fields of action. In order to best adapt to local conditions, the local management defines and implements environmental programs that are in line with our joint ecological commitment within the Dürr Group.

Products and services

As a mechanical and plant engineering company, our products are part of the production processes of our customers. With digital solutions and efficient innovations, we help our customers reduce their ecological footprint in production. We are thus making a significant contribution to improving the environmental performance of our customers. When planning and developing new products, we take the ecological effects of our machines and plants into account. Sustainability aspects, such as resource conservation, energy efficiency and reduction of emissions, play a central role in this process.

Reduction of the environmental impact of our activities at our sites

We are actively contributing to environmental protection, taking economic factors into account: We employ suitable processes, rules and state-of-the-art technologies to conserve resources, reduce operational emissions as far as possible and thus mitigate any negative ecological effects of our actions.

Business partners and suppliers

When selecting and evaluating suppliers, we include environmental aspects in our decisions. We see our business partners as important players in the continuation and improvement of our environmental protection measures. We expect our suppliers and business partners to adhere to our standards and guidelines with regard to environmental protection.

Management and employees

Our managers promote our environmental commitment and are aware of their function as role models. They strengthen the environmental awareness of employees through regular information, events and further training as well as by providing environmentally friendly resources.

Our environmental management officers actively promote compliance with ecological regulations. They are responsible for the continuous improvement of corporate environmental protection by proposing suitable measures and monitoring their implementation. They inform, advise and support the employees in all questions concerning environmental protection.

Our employees make a significant contribution to our environmental efforts and to compliance with our environmental protection measures. By acting environmentally consciously in their working environment, all our employees make a personal contribution to the ecological sustainability of the company. We support this and strengthen the environmental awareness of our employees through targeted initiatives.

Environmental Management System – Certifications

As part of our environmental management system, we regularly review internal processes and initiate improvement measures where necessary. It is our aim to gain certification according to ISO 14001 for all production and assembly sites and all sites with technology centers.

Legal compliance – Compliance with statutory provisions

We comply with legal and statutory requirements as well as with internal company guidelines. Our compliance management system takes ecological aspects into account.

When appropriate, we develop suitable procedures for implementing the environmental specifications in operational practice in consultation with the authorities and other stakeholders and keep them up to date wherever this is economically.

Transparency and continuous improvement

We are committed to the continuous improvement of our environmental footprint by reducing, avoiding or eliminating environmental impacts as far as this is possible within the scope of our business activities. We record, analyze and publish the environmental consequences of our actions.

We review the effectiveness of our environmental measures and the achievement of our environmental goals on a regular basis.
